

DoD Acquisition Best Practices Clearinghouse

A single, authoritative source of useful, validated, actionable practice information

Do these issues sound familiar?

- There are many practice lists to choose from but no guidance for selecting specific practices
- “Proof of practice” effectiveness is usually not available
- The connection between practices and specific program risks are undefined
- Success factors for practices are not well documented
- Implementation guidance is often missing
- The cost and timeliness associated with implementing and using the practices are often not specified

The Department of Acquisition Defense Best Practices Clearinghouse is being developed to address these and related issues.

The DoD Best Practices Clearinghouse (BPCh) can help by ...

- Serving as the authoritative source for practices in the Department of Defense and industry
- Initially targeting the needs of the software acquisition, software development, and systems engineering communities
- Connecting communities of practice, centers of excellence, academic and industry sources and practitioners
- Promoting and assisting in the selection, adoption, and effective utilization of “best” practices

For more information, please visit the BPCh site at
